Metamask

Metamask

- **MetaMask** is a **crypto wallet and browser extension/mobile app** that lets users store, send, and receive cryptocurrencies and NFTs.
- It connects users to **blockchain networks** like Ethereum, enabling interaction with decentralized applications.
- MetaMask manages **private keys locally on the user's device**, giving users full control over their digital assets instead of relying on a centralized service.
- It allows users to **swap tokens, manage multiple accounts, and access Web3 platforms** such as decentralized finance apps and NFT marketplaces.

Install Metamask

Install Metamask

Use a modern and secure web browser such as Google Chrome or Mozilla Firefox to install the MetaMask browser extension.

1. Visit the official extension store for your browser (the Chrome Web Store or Firefox Add-ons) and search for MetaMask, making sure the extension is published by Consensys to ensure it is the legitimate version.
2. After installing the extension, open MetaMask from the browser toolbar and follow the setup process to create a new wallet account. During this process, you will be asked to create a secure password and will be provided with a secret recovery phrase, which must be stored safely because it allows you to recover access to your wallet and funds if needed.

Obtain some fake ETH

Obtain some fake ETH

We are going to use an Ethereum test chain called Sepolia.

Use this faucet to obtain some ETHs in minutes: PoWFaucet

Obtain some fake ETH

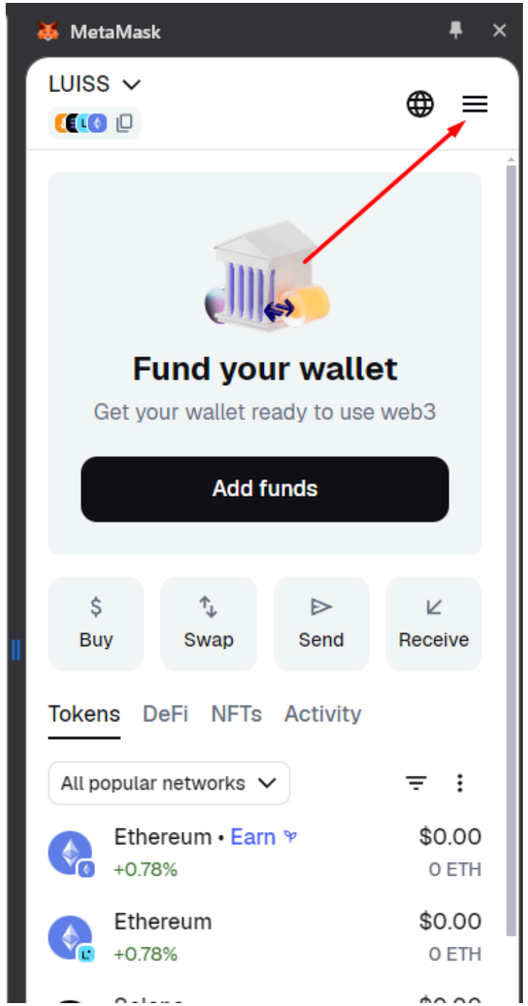
We are going to use an Ethereum test chain called Sepolia.

Use this faucet to obtain some ETHs in minutes: PoWFaucet

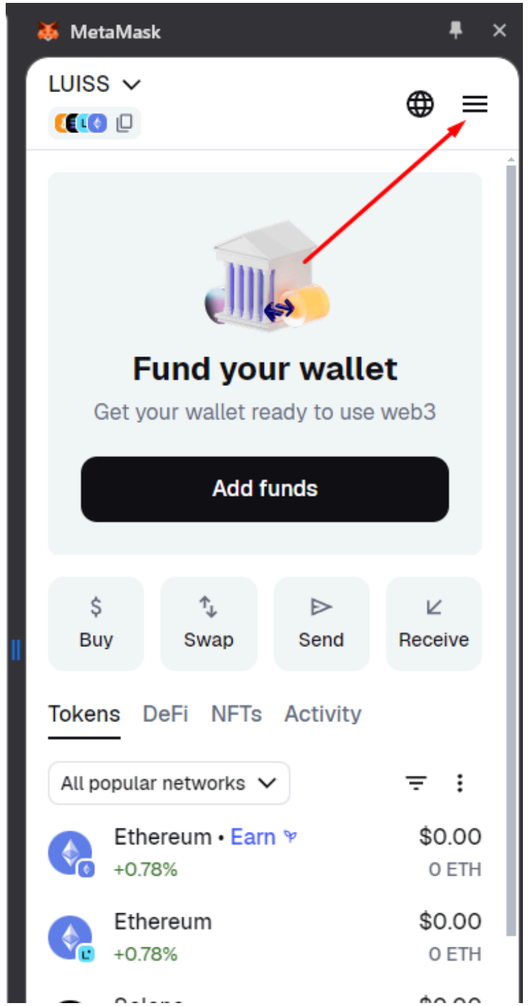
But first you need to find your Sepolia address!

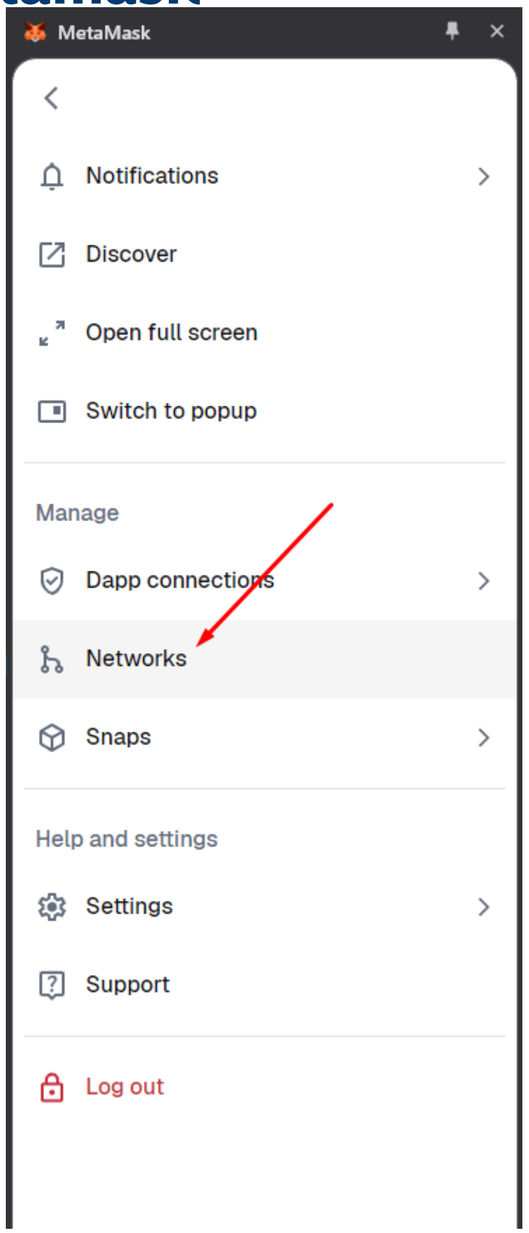
Enable Sepolia on Metamask

Enable Sepolia on Metamask

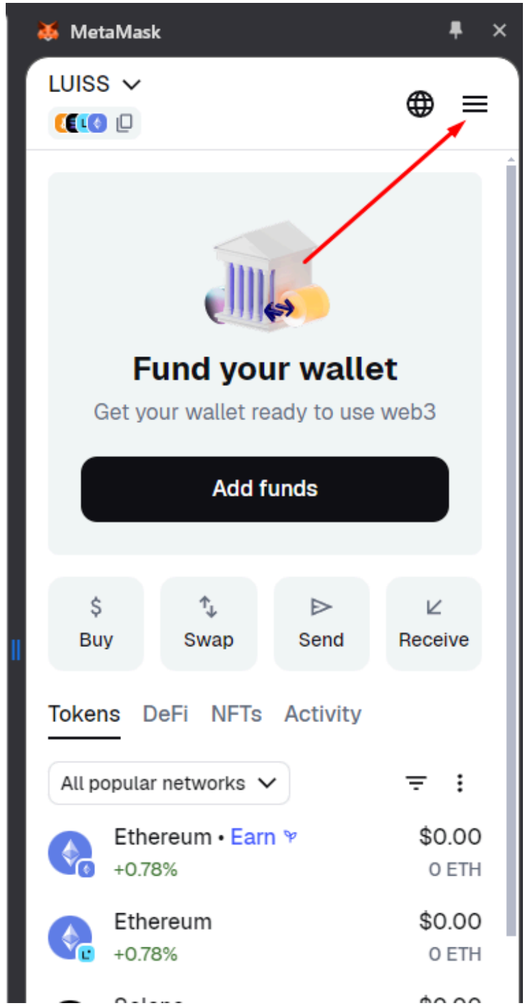


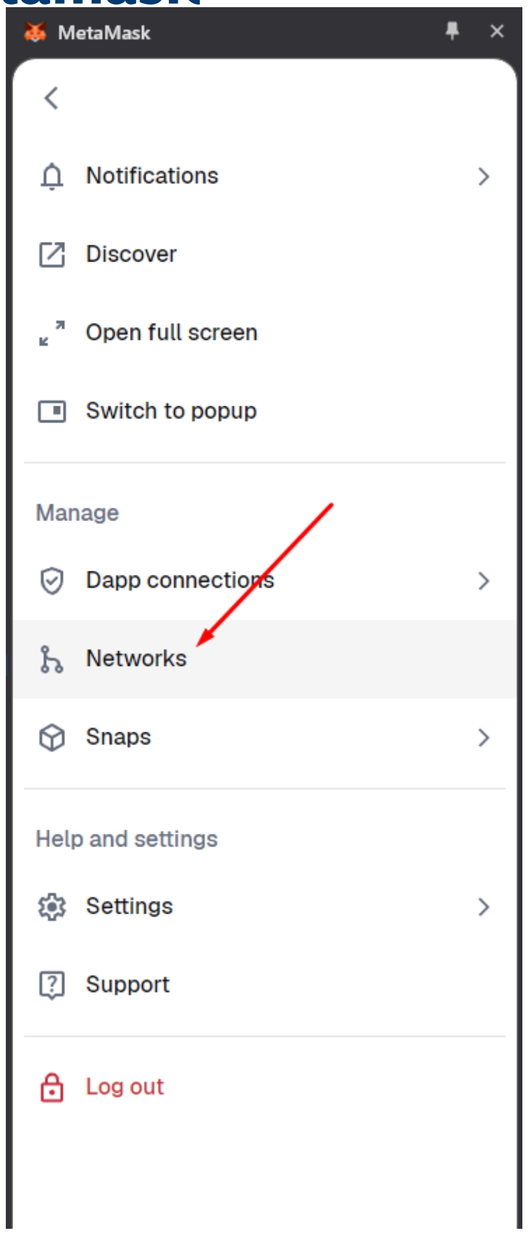
Enable Sepolia on Metamask

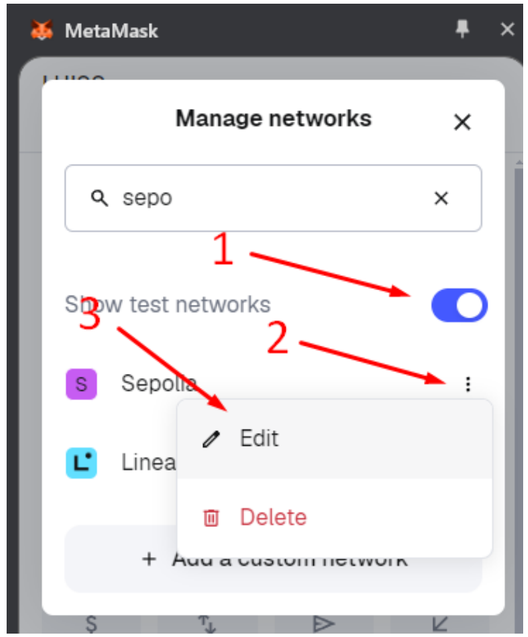




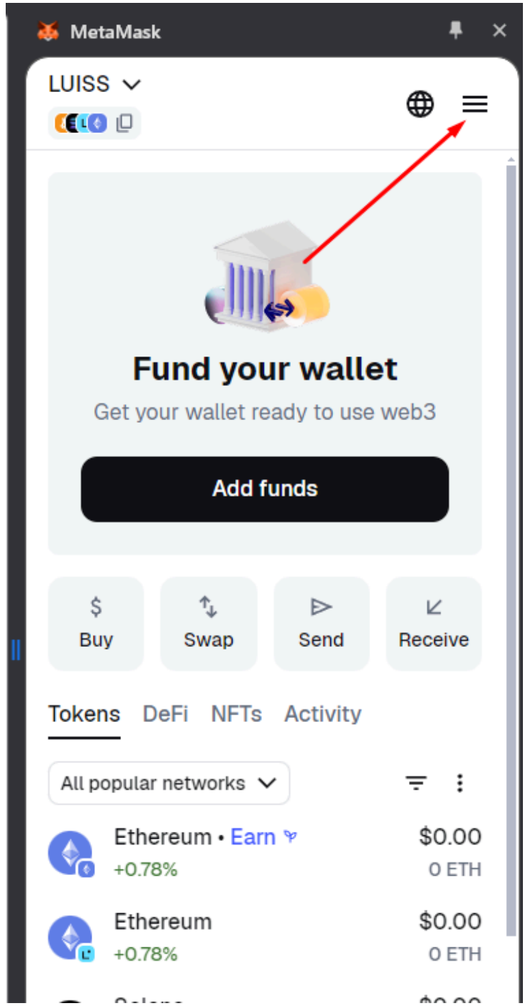
Enable Sepolia on Metamask

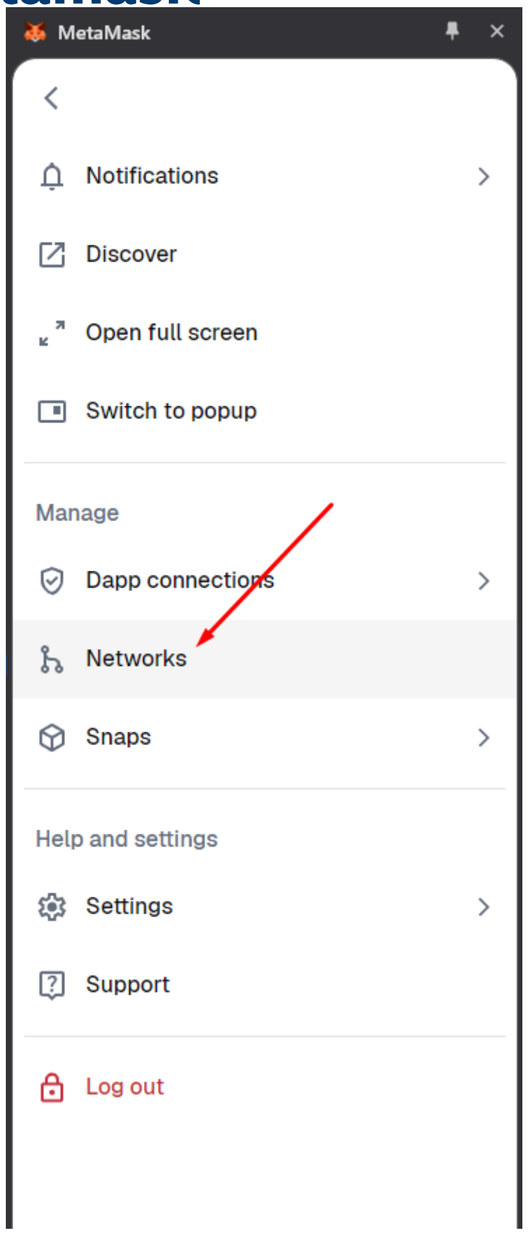


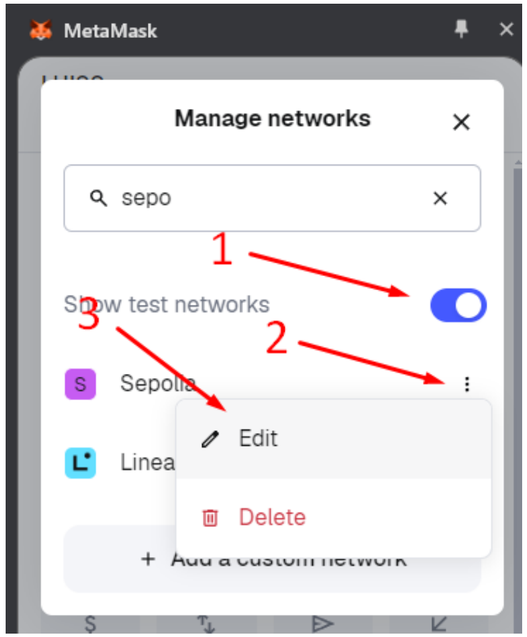


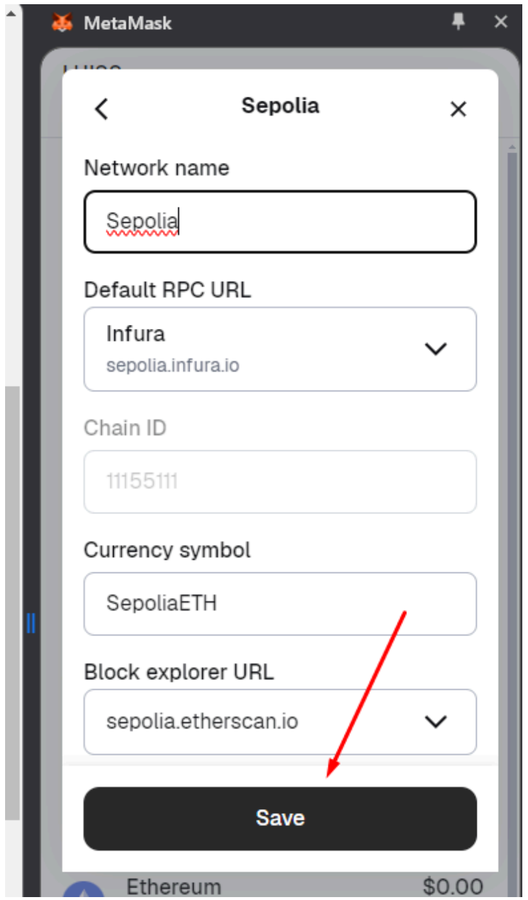


Enable Sepolia on Metamask

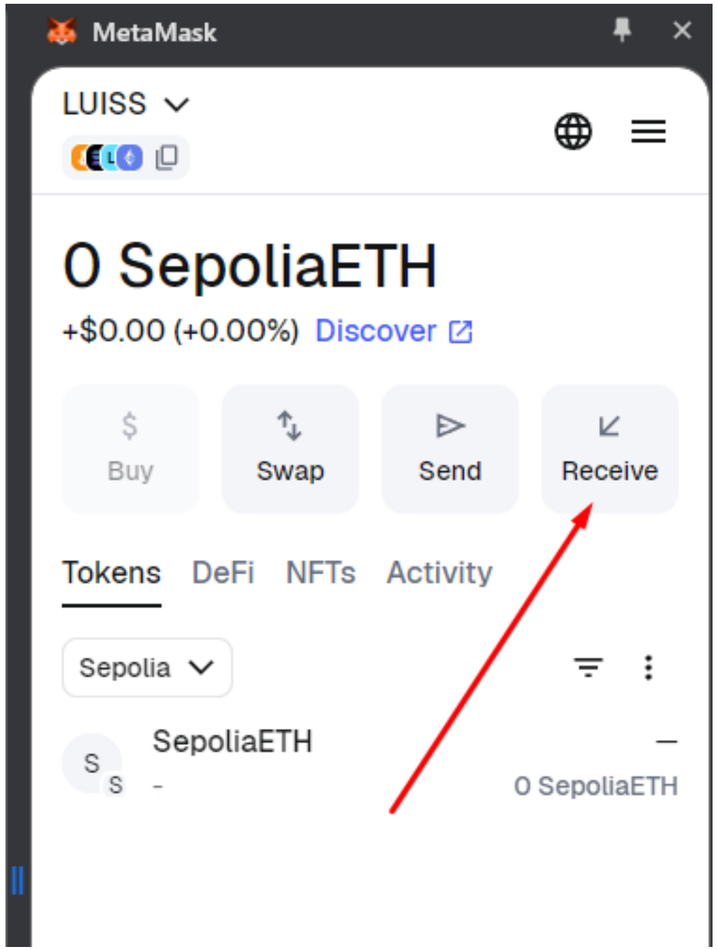




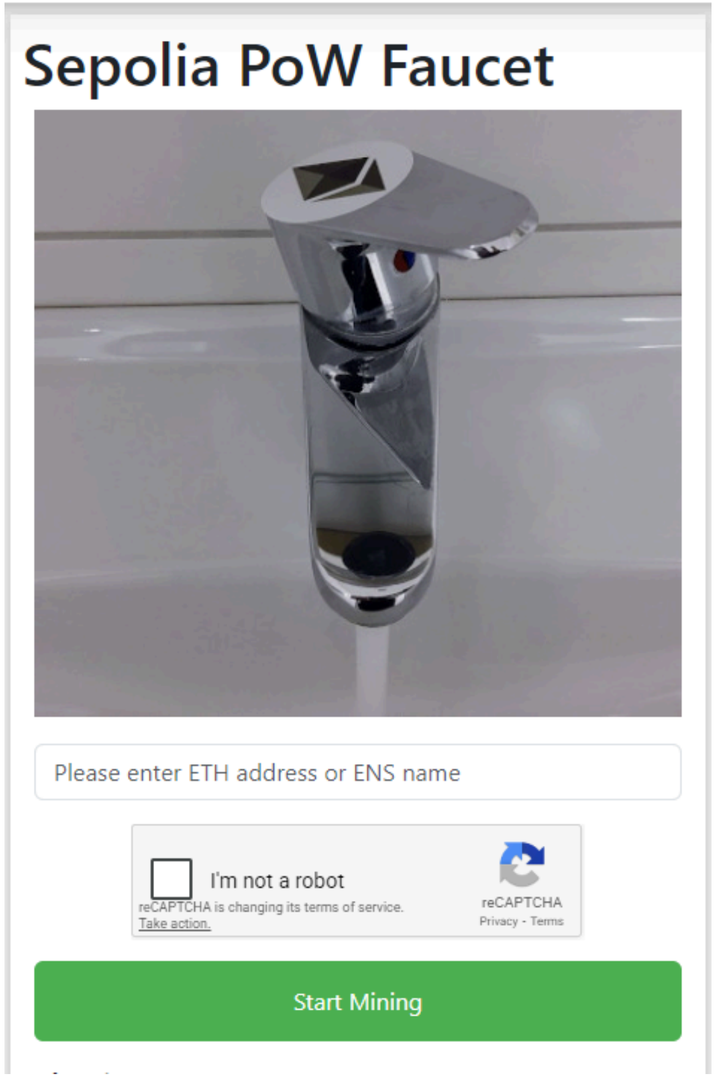




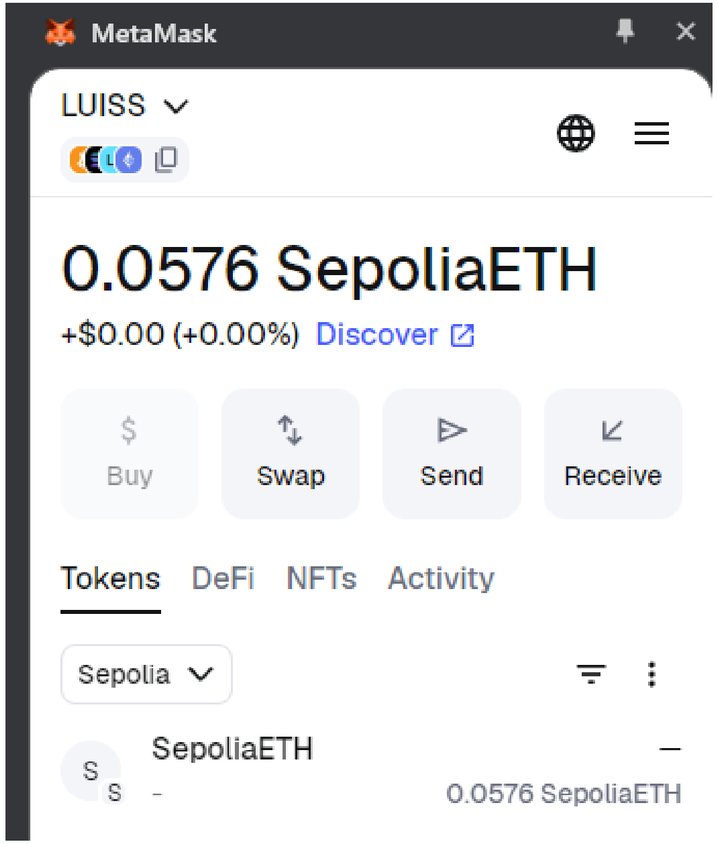
Get your Sepolia ETH Address



Mine some Sepolia ETHs



Check your balance



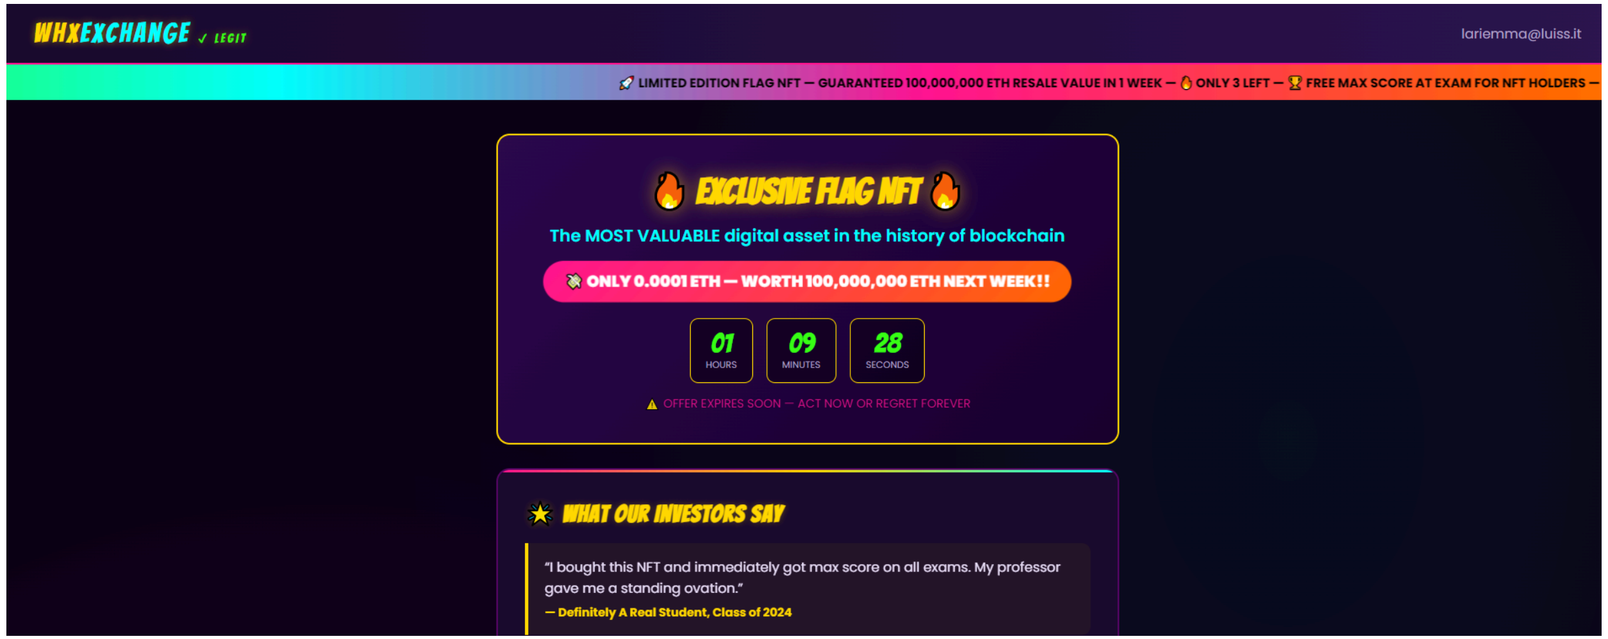
Play with your friends

Make your friend a special gift!

WebHackITExclusiveNFT

Ethereum challenge 01

ExclusiveNFT - Reconnaissance



What can we observe? The challenge will give you an NFT if you pay for it

ExclusiveNFT - Hypothesis

The student will obtain the NFT containing the flag:

ExclusiveNFT - Hypothesis

The student will obtain the NFT containing the flag:

1. Send some money to the requested address

ExclusiveNFT - Hypothesis

The student will obtain the NFT containing the flag:

1. Send some money to the requested address
2. Obtain the token ID giving to the website your wallet address and the transaction hash to obtain the **Token ID**

ExclusiveNFT - Hypothesis

The student will obtain the NFT containing the flag:

1. Send some money to the requested address
2. Obtain the token ID giving to the website your wallet address and the transaction hash to obtain the **Token ID**
3. Import the NFT into Metamask with the NFT Contract address and the token ID

ExclusiveNFT - Hypothesis

The student will obtain the NFT containing the flag:

1. Send some money to the requested address
2. Obtain the token ID giving to the website your wallet address and the transaction hash to obtain the **Token ID**
3. Import the NFT into Metamask with the NFT Contract address and the token ID
4. Obtain the flag from the NFT Metadata
